

## 9.3 Combining Two Functions: Products

<p><b>A Definitions</b></p> <p>The product of two functions is defined by</p> $(fg)(x) = f(x)g(x)$ $(f \times g)(x) = f(x) \times g(x)$	<p>Ex 1. Let <math>f(x) = x^2</math> and <math>g(x) = \log x</math>. Find</p> <p>a) <math>(fg)(1)</math></p> <p>b) <math>(f \times g)(0)</math></p>
<p><b>B Domain of the Product of Two Functions</b></p> <p>The domain of the product of two functions is the intersection of their domains.</p> $D_{fg} = D_{f \times g} = D_f \cap D_g$	<p>Ex 2. For each case, find the domain of the product of the given functions.</p> <p>a) <math>f(x) = 2^x</math> ; <math>g(x) = \sin x</math></p> <p>b) <math>f(x) = \frac{1}{x-2}</math> ; <math>g(x) = \log x</math></p> <p>c) <math>f(x) = \sqrt{3-x}</math> ; <math>g(x) = \log(x+1)</math></p>
<p><b>C Point by Point</b></p> <p>Evaluate <math>fg</math> at every possible number <math>x</math>.</p> <p>Ex 3. The functions <math>f</math> and <math>g</math> are given by their graphs on the right figure. Graph the function <math>fg</math>.</p>	

<p>Ex 4. Prove that the product of two odd functions is an even function.</p>	<p>Ex 5. Complete the following table. Justify your reasoning.</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <tbody> <tr> <td></td> <td><math>fg</math></td> <td>even</td> <td>odd</td> </tr> <tr> <td></td> <td>even</td> <td></td> <td></td> </tr> <tr> <td><math>g</math></td> <td>odd</td> <td></td> <td></td> </tr> </tbody> </table>		$fg$	even	odd		even			$g$	odd		
	$fg$	even	odd										
	even												
$g$	odd												
<p>Ex 6. For each case, justify your answer.</p> <p>a) Is the product of two polynomial functions a polynomial function?</p> <p>b) Is the product of two rational functions a rational function?</p> <p>c) Is the product of two sine functions a sine function?</p> <p>d) Is the product of two periodic functions a periodic function?</p>	<p>Ex 7. For each case, graph on the same grid the functions <math>f</math> and <math>g</math>, and then the graph of the product <math>fg</math>. Use technology (Desmos) to check your answer.</p> <p>a) <math>f(x) = x</math> ; <math>g(x) = \sin x</math></p> <p>b) <math>f(x) = \cos x</math> ; <math>g(x) = \sqrt{x}</math></p> <p>c) <math>f(x) = x^3</math> ; <math>g(x) = 0.5^x</math></p> <p>d) <math>f(x) = \log x</math> ; <math>g(x) = 10^x</math></p>												
<p>Ex 8. Find the zeroes of the product <math>fg</math> where <math>f(x) = \sqrt{x^2 - 4x}</math> ; <math>g(x) = \log(2 - x)</math></p>	<p>Ex 9. If <math>D_f</math> and <math>D_g</math> are the domains of the functions <math>f</math> and <math>g</math> and if <math>Z_f</math> and <math>Z_g</math> are the sets of zeroes of the functions <math>f</math> and <math>g</math>, make a statement about the zeroes of the product <math>fg</math>.</p>
